### 1. Brief Introduction

### 1.1. Main application & applicable range

DTSU666 three phase Smart meter (Din-rail) (hereinafter referred to as the "instrument") is designed based on power monitoring and energy metering demands for electric power system, communication industry, construction industry, etc. as a new generation of intelligent instrument combining measurement and communication function, mainly applied into the measurement and display for the electric parameters in the electric circuit including three voltage, three current, active power, reactive power, frequency, positive& negative energy, four-quadrant energy, etc. Adopting the standard DIN35mm din rail mounting and modular design, it is characterized with small volume, easy installation and easy networking, widely applied into the internal energy monitoring and assessment for industrial and mining enterprises, hotels, schools, large public buildings.

### Complied standards:

IEC 61010-1:2010 《Safety requirements for electrical equipment for measurement, control and laboratory use Part1:General requirements》

IEC 61326-1:2020 《Electrical equipment for measurement, control and laboratory use –EMC requirements Part1:General requirements》

MODUS-RTU protocol.

#### 1.2. Product Features

- 1) Characterized with positive and reverse active power, combined active power, combined reactive power, four quadrant reactive power metering and storage function with combination mode character can be set.
  - 2) RS485 communication interface, easy to exchange data with outside, MODUS-RTU protocol;
- 3) Adopting the standard DIN35mm din rail mounting and modular design, it is characterized with small volume, easy installation and easy networking.
  - 1.3. Model composition and meanings

### 1.4. types and specifications

Table 1 types and specifications

| Model No. | Referenced voltage      | Current specification | constant             | type        | Accuracy grade |
|-----------|-------------------------|-----------------------|----------------------|-------------|----------------|
|           |                         | 100A/40mA             | 100A/40mA 400imp/kWh |             | Active         |
| DTSU666   | 3*230 /400V             |                       |                      |             | power 1        |
| D13U000   | 3·230/400V              | 250A/50mA             | 400imp/kWh           | Transformer | Active         |
|           | 250A/50IIA 400IIIp/kWII | access                | power 1              |             |                |

<sup>\*</sup>Note: in order to prevail in kind

### 1.5. Temperature range

Operating temperature range:  $-25^{\circ}\text{C} \sim +70^{\circ}\text{C}$ ;

Relative humidity(Annually average): <75% non-condensing;

Atmospheric pressure:  $63.0\text{kPa} \sim 106.0\text{kPa}$  (altitude 4km and below), excepting the requirements for special orders.

### 2. Working Principle

### 2.1. Working Principle

The instrument are composed of high accurately integrated circuit specially for measurement

| DTSU666 three phase Smart meter (Din-rail) | ZTY0.464.1541    |
|--|------------------|
| User manual                                | Page 3, Total 18 |

(ASIC) and managing MCU, memory chip, RS485 communication module, etc.

Figure 2 Working principle block

### 2.2. Principle for the main function module

The special metering integrated circuit (ASIC) integrated six load two order  $\Sigma$ - $\Delta$  type of A/D conversion, please take the digital signal processing measured by the voltage circuit as well as all the power, energy, effective values, power factor and frequency. This metering chip can measure the active power, reactive power, apparent power, active energy, reactive power, apparent energy of each phase and combined phase, and at the same time measuring current, voltage effective values, power factor, phase angle, frequency and other parameters, entirely satisfying the needs of power meter. The chip provides an SPI interface, convenient for metering parameters as well as parameter calibration between the management MCU.

### 3. Main Technical Performance & Parameters

### 3.1. limit of error caused by the current augment

### 3.2. Starting and no-load condition

### 3. 2. 1. Starting

Under the power factor of 1.0 and started current, the instrument can be started and continuously measure (for multiple phase instrument, it will bring balanced load). If the instrument is designed based on measurement for dual directional energy, then it is applicable for each direction of energy.

Table 6 start current

| current transformers | $0.001I_b$   | $0.002I_b$   | $0.0031_b$   | 1            |

### 3. 2. 2. Test of no-load condition

When the voltage is applied with no current flowing in the current circuit, the test output of the meter shall not produce more than one pulse.

For this test, the current circuit shall be open-circuit and a voltage of 115 % of the reference voltage shall be applied to the voltage circuits.

The minimum test period  $\Delta t$  shall be

$$\Delta t \ge \frac{600 \times 10^6}{k \cdot m \cdot U_n \cdot I_{\text{max}}} [\text{min}] \text{ for meters of class } 0.5 \text{S or } 1$$

$$\Delta t \ge \frac{480 \times 10^6}{k \cdot m \cdot U_n \cdot I_{\text{max}}} [\text{min}] \text{ for meters of class } 2$$

k is the number of pulses emitted by the output device of the meter per kilovarhour(imp/kvar·h); m is the number of measuring elements;

Un is the reference voltage in volts;

Imax is the maximum current in amperes.

### 3.3. Electrical parameters

### 5. Main function

### 5.1. Display function

From the displayed interface, the electrical parameter and energy data are all primary side data (that is, the multiplied by current and voltage ratios). The energy measuring value will be displayed seven bits, with the displaying range from 0.00kWh to 9999999MWh.

Figure 3 display

### 5. 2. 2. Programming operation

Button description: "SET" button represents "confirmation", or "cursor shift" (when input digits), "ESC" button represents "exit", "→" (" ") button represents "add". The input code is (default 701).

Figure 4 Setting examples for communication address and Baud Rate

When input digits, "" can be used as cursor " - "motion button; " "is "add" button, "

"is Exit the programming operation interface or switch to the character interface from digit modification interface, add from the beginning after setting the digit to the maximum value.

### 5.3. Communication function

Characterized with a RS485 communication interface, the baud rate can be changed between 1200bps, 2400bps, 4800bps and 9600bps.

Factory default communication parameter is ModBus-RTU protocol, the baud rate is 9600bps, with the calibration bit and stop bit to be n.1, and the instrument address to be 1.

ModBus\_RTU protocol read command is 03H, write command is 10H.

Table 11 ModBus protocol address table

|  |                | 1                          |           |                        |               |  |

- Note 1: Single-precision floating point adopts standard IEEE754 format, total 32 bit(4 word). The single-precision floating point mode is assumed to be ABCD(high type in the front, low byte behind).
- Note 2: The table only give the regular correspondence address. If you need the primary data address and other addresses, you can call for the detailed communication protocol Energy measurement function
  - 5.4. Energy measurement four quadrant

| DTSU666 three phase Smart meter (Din-rail) | ZTY0.464.1541     |
|--|-------------------|
| User manual                                | Page 12, Total 18 |

The horizontal axis of the measurement plane represents the current vector I (fixed on the horizontal axis), and the instantaneous voltage vector is used to represent the current power transmission. Compared with the current vector I, it has phase angleφ. The counter-clockwise direction φangle is positive.

Figure 5 Measurement schematic diagram for energy four quadrants

### 6. Outline and installation size

### 7. Installation and operation manual

### 7.1. Inspection Tips

When unpacking the carton, if the shell has obvious signs caused by severe impact or falling, please contact with the supplier as soon as possible.

| DTSU666 three phase Smart meter (Din-rail) | ZTY0.464.1541     |
|--|-------------------|
| User manual                                | Page 14, Total 18 |

After the instrument being removed from the packing box, it should be placed on a flat and safe plane, facing up, not overlaying for more than five layers. If not installed or used in a short time, the electric meter shall be packed and placed to the original packing box for storage.

The waterproof and dustproof rating of the front panel of the Meter is IP51, it shall be used in the meter box meeting the requirements of IP51.

### 7.2. Installation and tips

### 7. 2. 1. Installation and Inspection

If the model No or configuration in the original packing box is not in accordance with the requirement, please contact with the supplier. While, if the inner package or shell has been damaged after removing the instrument from the packing box, please do not install, power on the instrument, please contact with the supplier as soon as possible, instead.

#### 7. 2. 2. Installation

It requires experienced electrician or professional personnel to install it and you must read this operation manual. During the installation, if the shell has obvious damage or marks caused by violent impact or falling, please do not install it or power on and contact with the supplier as soon as possible.

Figure 9 install picture

|--|--|---|

### 9. Transportation & Storage

When transporting and unpacking the products, please confirm they are not severely impacted, transporting and storing based on Transportation, basic environmental conditions and testing methods for instrument and meters of JB/T9329-1999.

The instrument and accessories shall be stored in the dry and ventilated places, to avoid humidity and corrosive gas erosion, with the limited environmental temperature for storage to be  $-40^{\circ}\text{C} \sim +70^{\circ}\text{C}$  and relative humidity not exceeding 85%.

### 10. Maintenance & Service

We guarantee free reparation and change for the multi-meter if found any unconformity with the standard, under circumstance of that the users fully comply with this instructions and complete seal after delivery within 18 months.

| DTSU666 three phase Smart meter (Din-rail) | ZTY0.464.1541     |
|--|-------------------|
| User manual                                | Page 18, Total 18 |

Dear clients,

Please assist us: when the product life is end, to protect our environment, please recycle the product or components, while for the materials that cannot be recycled, please also deal with it in a proper way. Really appreciate your cooperation and support.
